Technical Architect with nearly a decade of full-stack engineering experience across aerospace, healthcare, and SaaS. I specialize in designing and shipping cloud-native systems — from infrastructure to frontend — with a growing focus on practical AI integration: LLM-powered products, agentic workflows, and semantic search pipelines. I bring a pragmatic approach to AI adoption, integrating it where it creates genuine value rather than for its own sake, and I thrive in environments that demand both technical depth and business impact.

SKILLS

AI / LLM · Claude Code, Cursor, Azure Bot Framework, OpenAI API, Vercel AI SDK, Langfuse, RAG pipelines, pgvector, Neo4j

Cloud & DevOps · AWS CDK, Terraform, Lambda, Step Functions, EventBridge, EKS, API Gateway, SQS, DynamoDB, Azure, OpenShift, Kubernetes, Jenkins

Languages & Frameworks · TypeScript, Node.js, Python, Java, Golang · Next.js, React, Angular, Fastify, Spring, FastAPI

EXPERIENCE

Technical Architect · Livefront 2025 – Present

- Architected an AI-powered oncology patient triage system using Azure Bot Framework and OpenAI, enabling physicians to evaluate patient symptoms through a conversational interface.
- Built internal and client-facing DevOps tooling that unified Jira, GitHub, and CI systems into a single workflow platform.
- Lead architect for medical pricing operations services, owning a significant portion of the system and leveraging Claude Code and Cursor as primary agentic coding tools.
- Developed and taught an internal course on AI SDKs and tooling, upskilling the engineering team on practical LLM integration.

Technical Architect · Freya Systems 2023 – 2024

- Led architecture and system design for aircraft maintenance and supply chain applications across AWS, Azure, and OpenShift.
- Built DevOps pipelines using Jenkins, Spring Batch, Hadoop, and Spark; designed and implemented custom ETLs across distributed data sources.
- Designed APIs and backend services in Spring; delivered frontends in React and Angular.
- Mentored a team of 5 developers through biweekly knowledge transfers focused on DevOps and cloud engineering.

Senior Software Engineer (Contract) · ComplyAuto 2022 – 2023

- Independently built environmental compliance features across a Fastify / GraphQL / React stack.

Software Engineer II · 98point6 2021 – 2022

- Designed and implemented a serverless electronic prescription system using AWS CDK, Lambda, Step Functions, SQS, and DynamoDB — migrating physicians from manual call-in workflows to a fully digital FHIR-compliant system.
- Structured complex clinical workflows as composable Lambda and Step Functions pipelines, with a heavy focus on serverless architecture patterns.

Senior Software Engineer · Freya Systems 2019 – 2021

- Developed aircraft fleet management software in Java and Spring; collaborated with data scientists to integrate analytical models into production systems.

Software Engineer · The Boeing Company 2016 – 2019

- Built analytics and reporting tools for military aircraft mechanical health monitoring; developed ETL pipelines using Java, Python, Spring Batch, Hadoop, and Spark.

EDUCATION

B.S. Information Science & Technology · Penn State University 2011 – 2015
